- Instantly Decision and Risk-Price to all your critical decision criteria 24/7
- Faster manual decisioning for loan capture and increased internal efficiencies
- Minimize Pending Loan Queues and Audit Exceptions
- Improve Loan Quality, Production, and Bottom Line income
- Internal Processing screens assure complete and quality loan packaging prior to funding
- Scalable for any size or type of operation
- Multi-Channel Product decisions – Non-Auto
- Full Internal reports and ongoing data analysis

Major Reasons to Consider the Lendsys and DealerTrack Connection... and why Lenders are choosing us!

1. Quick and Easy, Low-Cost Start-up and Implementation - Lenders can be up and rolling, acquiring applications and funding loans within a week. Our Web-based system means there is no software to install or maintain, so you need no internal IT staff or resources to get started.

- Low, one-time initial set-up fee. We will guide you completely through the set-up process to your planned Go-Live date;
- A low monthly fee maintains your system data, security, and provides for unlimited access 24/7-365, as well as covering all ongoing system enhancements;
- And, a small per-decision fee for ongoing system use;

2. Step Up – Reduce Overhead and Increase Overall Efficiency – Look no further! If you’ve been holding off on a full-featured LOS system that provides everything you’ve been looking for, or you have been stymied by the price of other systems, or by features that you’ll never use – Lendsys is your solution.

3. Get a Lift - In Efficiency, Loan Capture, and Funding, Exactly The Loans You Want: From Prime to Subprime, or full spectrum, whatever a lender’s focus, the easy to use but sophisticated algorithms and display matrices provide each lender the ability to create and see their exact decision criteria, standards, and steps, on every decision. Never miss a loan you want, and don’t waste time on ones you don’t.

Being able to communicate quickly and easily with dealers is another critical function of the system that results in lift. Automated email alerts to the right (*multiple and individual*) people in your organization assure that you know what’s in the system and needs to be acted on without having to be logged in and watching the system 100% of the time.

Fast and easy communication of approvals and follow-up on steps and conditions results in higher loan capture and funding, with extreme efficiency. The system focuses lenders on the loans they want resulting in actually getting more, from less. Keener focus results in more funding!

The Lendsys, LLC LOS software is integrated with DealerTrack to provide Lenders in all lending sectors, regardless of size or marketplace, a new and powerful Automated Lending Platform to speed loan decisioning, underwriting accuracy, operational efficiency, increase loan packaging quality, and increase funding.

What has been needed by lenders for a long-time is now available through Lendsys, LLC's robust, Multi-tiered "What If" loan decisioning model! The decision modeling works much like how a lender's best loan officers manually underwrite and decision loans, but it's on the job 24/7, instantly parsing and displaying all relevant loan decision data to lenders and communicating with Dealers.

The system decision matrices and individual lender criteria are always available for instant auto-approval as well as exceptionally fast (at least twice as fast as other systems) manual review and decisioning.

If you have been looking for a quality, proven, efficient and cost-effective LOS, take a step up, and in the right direction. Other LOS platforms and decision engines don't compare!

4. Automate Manual Decisions and Pricing – Decrease Manual Decision Times and Increase Dealer Communication - All lenders know that just because two consumers have the same "Credit Score", it doesn't mean their credit profiles, risk, deal structure, or decisioning criteria are the same for each loan submission.

The automated, scalable, and unlimited "What If" decisioning methodology increases approvals in lenders sweet spots and decreases the "Pending" loans created by other automated systems thereby eliminating the time, energy, and inconsistencies associated with manually decisioned loans.

5. You Still Want to manually Decision Every Loan? The manual decision process, while still manual, is at least twice as fast as any other system. Our decisioning model and filters assure that you focus first on decisioning on the loans that you really want, by filtering through unwanted and un-approvable applications with our customizable dashboards. You focus on and get what you want, with extreme speed, consistency, and efficiency.

6. Loan Packaging, Processing and Dealer Rep Services Provided – From signing and managing your dealers, to fully validating, packaging and funding loans to each lender's specifications. Lenders receive fully processed and validated loan packages, ready for funding on their core system. ***Increase your internal efficiency, lower your fixed-costs and increase production with our unique system and processes! Or you can do it all.***

7. Doubles as an Internal Automated Loan Approval Engine - The system can also be utilized by Lenders (*like Credit Unions and Banks*) as a complete internal loan application and decisioning channel, and it's also a great call center loan-decisioning platform, providing the granularity and security of individual permission-based access and authority levels for authorized system users.

And, of course there are many, many more features of the system.
